DEVICE INSTALLATION AND CONFIGURATION

Warning!
The **AX PC PRO** is capable of playing sound at a high volume levels. Do not use headphones for prolonged amounts of time at a loud volume. Always use caution when using any headsets.

Before putting the **AX PC PRO** on your head, set all volume levels to 0 then work your way up to an acceptable volume level. **Failure to do this may lead to permanent hearing damage.**

Windows XP/Vista Getting Started

1. Unpack **AX PC PRO**.

2. Turn all volume knobs to zero (❸) (❹) (❺) (❻).

3 Insert CD into computer CD/DVD drive, if the computer does not automatically launch the installation application, you can do this from "My Computer."

4. You will be prompted to plug in the **AX PC PRO** to a USB port on your computer. We recommend using a Root Hub, or a port that is on the back of your computer. Front Ports, and hubs, both powered and un-powered may provide limited USB functionality.

5. After driver installation completes, reboot computer, and wait for it to boot up completely before proceeding.

6. Adjust your computer to output in 5.1 channel mode.

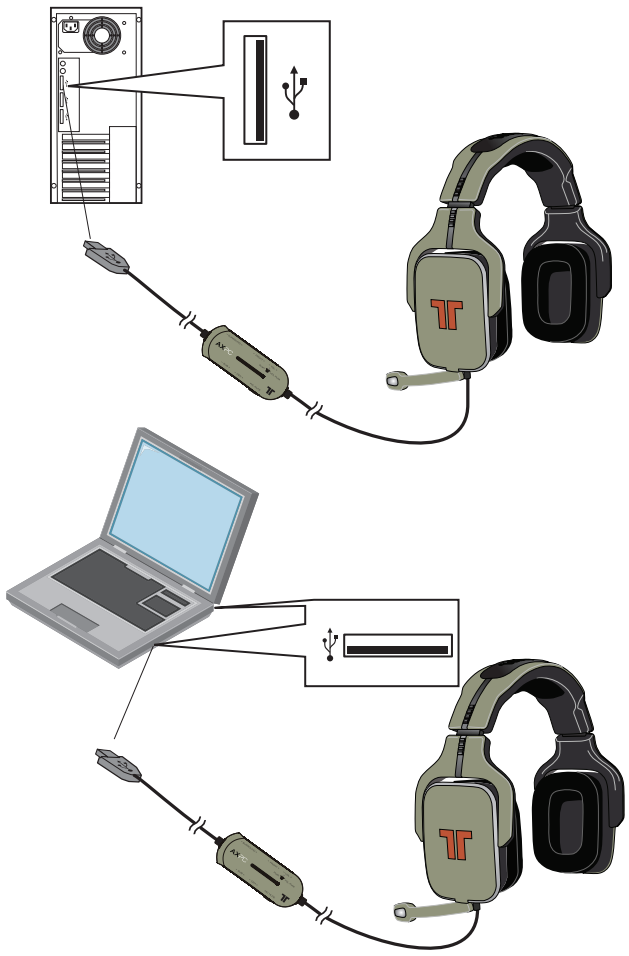
(**VISTA / XP**) You can adjust the **AX PC PRO** sound configuration by going to Control Panel, and adjusting the Sound and Audio Options, and also in the **AX PC PRO** administration panel, accessible via the system-tray icon.

(**MAC**) You can adjust the **AX PC PRO** Sound configuration by going to Applications/ Utilities/Audio Midi Setup. From here you can set the **AX PC PRO** to be the "Default Output" and "System Output". Further you can change more options by selecting our device under "Properties For."

7. With headset on head, and all volume knobs turned down, adjust volume to a comfortable listening level while playing audio.

8. If you wish to use the microphone, un-mute it by pressing the mute/un-mute button (❼). By default, the microphone may be muted at startup.

Connecting to the PC.



If you experience issues plugging into a docking station, or USB hub; try connecting directly to one of the root hub ports. Also try disconnecting your other USB peripherals, one at a time, to see if there is a conflict.

PRODUCT FEATURES

- **Unlock the true potential of your USB 1.1 (or greater) enabled computer:** The Audio Extreme **AX PC PRO** Headset System incorporates a precision 5.1 channel amplifier with 8 high quality speakers creating a true surround sound experience.

- **No power cables required:** The **AX PC PRO** will draw the power needed from your computer, for portable and convenient listening.

- **USB 1.1 (or greater) Port Connect to a PC, or Mac**

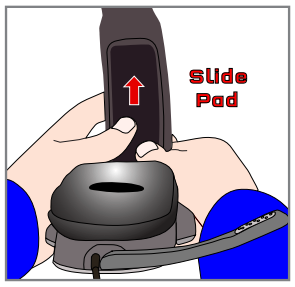
- **Xtreme In-line Audio Controller:** allows for individual control of Front, Rear, Center, and Subwoofer channels. (❸) (❹) (❺) (❻)

- **Independent output and Mic mute**: Master Volume Mute (❷) and Microphone Mute (❼) controlled independently on Audio Controller.

- **Removable Mic:** Microphone is fully adjustable and Removable.

- **Rumble Technology:** Easy on the ears, while adding another dimension during game play and movie playback

- **Customizable:** The **AX PC PRO** offers many features for personal customization including removable and replaceable ear and head rail pads.



To remove top head rail pad, hold headset upside down, with microphone side of headset close to your chest. Slide the pad away from your body, and towards the "R" emblem on the head rail. Once it pulls up a little, pull the pad off. Installation is reverse of removal.

FAQ

NOTE - The first troubleshooting step should always be to plug the AX PC PRO into a USB Root Hub (located on rear of desktop PC, and possible side of laptop)

Q Why don't I hear sound output from any channels?

A Check that the **AX PC PRO** is the default device in:

(Windows) Control Panel\Sounds

(Mac) Applications/Utilities/Audio Midi Setup

Q Why do only certain channels output audio?

A Make sure the volume knobs are not turned down all the way to 0.

Ensure the mute button is not depressed.

Check to make sure the computer is configured correctly to output 5.1

Check to make sure the software is able / configured to output 5.1

Q. Why can't I hear anything from the microphone when recording? AND/OR Why can't others hear me during communication?

A Check to see if indicator light (8) is Purple, and that when you press the microphone mute button (❻), it cycles the light (❽) between blue and purple.

Check to make sure that the microphone is selected as the default recording / input device in:

(Windows) Control Panel\Sounds

(Mac) Applications/Utilities/Audio Midi Setup

Ensure microphone port being used is not muted, and is turned up in the in the "Recording" mixer.
